

INOIS® TS sl (slim) Acoustic element

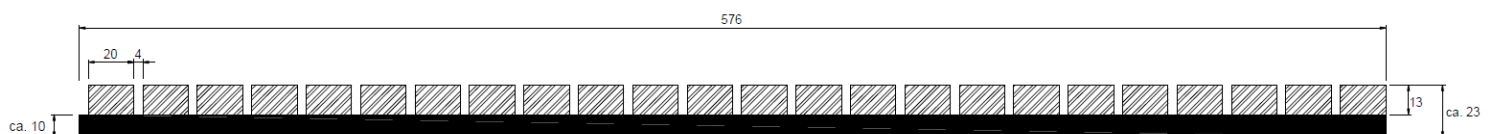

**Sustainable and stylish trend products from the eurolpac INOIS® acoustic family.
The fleece used consists of up to 50% recycled PET**

The acoustic effect of the INOIS® TS provides a unique and homely atmosphere, in commercial as well as in the private sector. The MDF slats can be covered with a hard wax finish and form a trendy acoustic combination with the fleece.

The panels fit ideally into all new and old buildings or remedial measures. The slat look makes the room appear deeper, larger and provides a modern eye-catcher. The result is reduced reverberation and a calming room climate.
