

RUSTICA® SOLID

Panel Type:	A finger-jointed glu-lam panel completely faced with noble wood of the same wood species: Oak European, A - Solid Wood Character / B - Solid Wood Character (also available in Sycamore, Steamed Beech, Ash and Walnut European)
Format:	3000 x 1250 mm, other Formats on request
Thickensses	19 mm, 27 mm, 40 mm
Gluing:	Veneer joining and lamination glue formladehyde free
Typical Segments:	Shopfitting, Exhibition Stands, Interior Projects, High End Furniture Industry and many more
Advantages:	<p>High quality finger-jointed glue-lam panel in European Oak. This panel is faced with europiac Noblewood. Generally, Veneer and core panels are made from the same wood species, whilst the veneer layons are spliced in solid wood character.</p> <p>One of the big advantage is the panels' robustness and stability. With natural furniture and interior construction elements from solid wood life becomes more intense and less worrying in terms of solidity during intense use of the furnishings.</p> <p>When using moisture permeable surface treatment an optimum ambient climate can be achieved. Open pores on wooden surfaces reduce the amount of electrostatically charged dust particles, the ambient relative humidity is more balanced and even some antibacterial effects can be achieved especially when using Oak.</p>
