

## RUSTICA®INTERO

A product as beautiful and unique as nature itself.

**Veneer:** The idea behind this wonderful product, in line with the mega trend towards sustainability, is to buy wood that would normally never be used for NOBLE WOOD production from an optical point of view. Domestic wood species are usually not bred, but grow over 100 years and more, as nature likes it. INTERO sorting exploits this fact and avoids breeding and plantations where it is refurbished with great care and processed to NOBLE WOOD COVER LAYERS. Cracks, branches, discolorations, wide cracks, fancy branches and strong discolorations – exactly these are deliberately sought and deliberately used with a low level of wastage, to create a wonderful and simply natural surface. Each board is a unique piece that tells stories of centuries. Nothing is as wonderful as the INTERO sorting, not just a NOBLE WOOD MATERIAL, but the connection of nature and the responsibility in dealing with it.

**Veneer thickness:** About 0.6 mm to 2.5mm

**Quality:** Random matched  
The veneer is mixed from about 6 different packages on the A side. The veneer width is about 8-15 cm.

**Advantage:** Sustainability, Individuality, Resource Conservation, Natural.

**Field of application:** Furniture, wall cladding, etc.

**Certificates:** FSC and PEFC

### Selectable variants:

**Carrier surface:** dyed in black, red, brown, blue, green (other color on request)
