...das beste aus holz!

Thanks to the processing of the wood as a veneer, the utilisation of natural resources is reduced, which confirms the sustainability aspect of the product. Further the production of INOIS S-WAVE is almost CO- neutral.

Advantages:

Compared to conventional products, INOIS S- WAVE can be easily installed with groove and external tongue in different versions, according to individual requirements: wave, steps and random.

Applications:

INOIS S-WAVE is the element for a wide range of buildings with different properties like concert halls, conference rooms, offices, schools, hotels and airports.
